

CASE STUDY

BOMBARDIER LEARJET

ORACLE BUSINESS INTELLIGENCE SOLUTION

- Oracle Answers
- Oracle Interactive Dashboards
- Oracle BI Publisher
- Oracle Warehouse Builder
- Oracle 10g Database

THE CHALLENGE

Bombardier Learjet needed a data warehouse and analysis solution for their Finance and Aerospace users that would replace their current data warehouse and reporting solution for viewing labor and cost information. This new solution was required to provide real-time data efficiently and simply, be multidimensional to allow for large volumes of historic information and be scalable and adaptable to the growing needs of their organization.

THE SOLUTION

Optimum advised and developed an analytic solution that met Learjet's specific user requirements. This was achieved through the migration of existing Oracle tables to a 10g environment and converting the existing web applications to utilize the Oracle Business Intelligence application tools and dashboards within the BI application.

STRATEGIC RESULTS

By utilizing a custom Oracle Business Intelligence solution, Learjet was able to:

- Simplify user queries at both the detailed and summary levels

- Provide near real-time access to labor and costing information
- Provide efficient access to information for analysis and decision making, forecasting and reporting
- Reduce user reliance on IT for reporting
- Provide a solution that is scalable and can easily adapt to growing needs

ABOUT BOMBARDIER LEARJET

Bombardier builds them - three families of high-performance business jets so versatile and innovative that they are as inspiring to those who build aircraft as they are to those who fly them. Between capitals and countryside, conferences and continents and business and leisure centers of the world, Bombardier business aircraft constantly exceed the needs and expectations of the world's most discerning travelers.
